*Supportive but not conclusive research shows that consumption of EPA and DHA omega-3 fatty acids may reduce the risk of coronary heart disease.

†Products providing at least 400 mg of plant sterols and stanols, consumed twice a day with meals for a daily total intake of at least 800 mg, as part of a diet low in saturated fat and cholesterol may reduce the risk of heart disease. A serving of Cholesterol Reduction Complex supplies 1000 mg of plant sterols and stanols.

*Based on laboratory studies, it also helps protect arteries against the oxidation of low density lipoproteins (LDLs), which may help promote blood vessel function.
