Did You Know?

In 2005, **218,316 reported poison exposures** came from household cleaning products.

Common household cleaners and appliances give off fumes, which can potentially **increase the risk of asthma in children.**

The EPA says that **only a fraction of the more than 81,500 registered chemicals** have gone through testing for human health concerns. 81,500 represents approximately one in every 750 known chemicals.

The EPA lists the following household cleaning products as **"hazardous waste"** - oven cleaners, drain cleaners, wood and metal cleaners and polishes, toilet cleaners, tub, tile, and shower cleaners and bleach.

The average U.S. household generates more than 20 pounds of household hazardous waste per year, and the average home can accumulate as much as 100 pounds of household hazardous waste in the basement and garage and in storage closets.
