

Vita-D₃[®]

Promotes healthy bones and teeth

GET TO KNOW VITA-D₃

Are you one of the many Canadians with insufficient vitamin D levels? Most people don't get enough from food alone, and, depending on where you live, the time of year, and other factors, you may not be getting the vitamin D you need. Why? Lack of sun exposure. Vitamin D is considered the "sunshine vitamin" because it's produced as sunlight touches your skin. Very few foods in nature contain vitamin D, and fortified foods (primarily milk) provide most of the vitamin D in the North American diet.¹

Vitamin D plays a **major role in protecting your health** and is vital for overall well-being. One Vita-D₃ tablet provides **1000 IU of high-potency vitamin D₃** to:

- Help in the development and maintenance of bones and teeth
- Aid in the absorption of calcium and phosphorus
- Help reduce the risk of developing osteoporosis when combined with calcium intake, a healthy diet, and regular exercise
- Help protect cells against the oxidative damage caused by free radicals

IS VITA-D₃ RIGHT FOR ME?

- ✓ If you may be lacking in adequate vitamin D through diet or sun exposure.
