FAQs

What's the difference between turmeric root and turmeric extract?

Curcumin is found in the root of the turmeric plant but only comprises a small amount of the turmeric root; an average turmeric root contains less than 5% curcumin, and this amount varies from turmeric root to turmeric root. On the other hand, turmeric extracts are made by extracting curcumin from the turmeric root and are standardized to contain concentrated amounts of curcumin. Each Turmeric Boost capsule includes 475 mg curcuminoids.

Why is black pepper extract included in the formula?

Because curcumin has been found to have relatively low absorption, each Turmeric Boost capsule contains 5 mg black pepper extract (*Piper nigrum*): a key ingredient that enhances absorption and increases bioavailability^{1,2}

Can Turmeric Boost be taken any time of day?

Turmeric Boost can be taken any time of day but should be taken with food or a meal shake.
