GET TO KNOW GET CLEAN® WATER

What’s in your water? Chemicals that can be harmful to your health can actually turn up in the water your family drinks. Did you know that up to 20% of human lead exposure comes from drinking water? Heavy metals, industrial pollutants, pesticides—these harmful contaminants can enter our water supplies and have the potential to create long-term health challenges. The good news is that cleaner, healthier water is just a pitcher away with Get Clean Water.

Get Clean Water is a multipatented, revolutionary water-filtration pitcher system:

- Certified by the Water Quality Association (WQA) to reduce up to 99% of lead, along with over 50 other contaminants
- Designed so each Get Clean Water filter handles 80 gallons of water, twice as much as Brita® and PUR®. And each filter is made from sustainable coconut shell carbon using a zero emission process
- Features a BPA-free, food-safe pitcher with 10-cup capacity
- Outperforms leading brands [see graphic below]

THE SHAKLEE DIFFERENCE

At Shaklee, we are committed to innovating through science and looking to nature for the answers that can provide healthier lives.

The Get Clean Water Pitcher:

- Has the only pitcher filter certified to reduce up to 99% of lead
- Has the first refillable carbon-block pitcher filter system designed to reduce environmental waste to help keep the planet green

Get Clean Outperforms Leading Brands!

1This comparison of current certified reduction claim listings by WQA and NSF was conducted on January 9, 2019. The chart lists contaminants referenced in NSF/ANSI Standards 42 and 53. It is based on the Brita OB03 and the PUR CRF-950Z replacement cartridges and the pitcher models using these cartridges. It is valid for only the named products marketed at that time.
Get Clean® Water (U.S.)

**USAGE**

Prior to using, presoak the filter in water for at least 2 hours to remove any loose carbon particles. Insert filter into the filter housing and twist the lid on. Insert filter housing into hole in the green portion of water reservoir. Pull the stopper valve up and fill with tap water. Once filtering is complete, pour and enjoy safe, great-tasting water.
